## SEED GERMINATION 90%

### About

Seed germination and young plant production starts with the right growing medium or substrate. Every seed is capable of growing into a new plant, under proper environmental conditions such as the right temperature, moisture and sunlight.

### Guide for growing the seed:

- ◇ Choose the grow bag as a growing medium.
- ◇ Fill the container with highly nutritious Potting mixture.
- ◇ Choose the seed of your choice.
- ◇ Sow the seed 0.5 cm deep in the soil.
- ◇ Space the seedlings with proper gap.
- ◇ Sprinkle the water slightly to maintain the moisture.
- ◇ Place the bag in the place with medium sunlight.
- ◇ Within 6 to 8 days the seeds will start germinating and it varies slightly depending on the variety of seed.
- ◇ After the seed sprouts, transplant the seedling to individual pots.
