

About

Bovine manure mainly constitutes digested grass and grain, which is waste products of bovine animal species. Manure is a valuable source of key nutrients including nitrogen (N), phosphorus (P), potassium (K), sulphur (S), magnesium (Mg), and calcium (Ca), as well as certain micronutrients. Bovine manure fertilizer when turned into compost and fed to plants and vegetables it becomes a nutrient-rich fertilizer and excellent growing medium for garden plants.

Benefits

- Improve the structure and fertility of the soil.
- Adds plentiful amounts of organic matter and beneficial microorganisms.
- Breaks down pollutants in the soil and play a vital role in the nitrogen cycle.

Dosage

200 g to 250 g

Indoor & Ornamental
Plants

250 g to 300 g

Outdoor & Flowering
Plants

150 g to 250 g

Kitchen & Garden
Plants
